Title: Enterobacter nimipressuralis as a cause of Pseudobacteremia

Version: 4 Date: 13 July 2010

Reviewer: Armand Paauw

Reviewer's report:

Major Essential Revisions

- As mentioned the English must improve. I'm not a native speaker and my English is not well enough to correct the errors.
- 16S rRNA description and results (page 5 line 18 to page 6 line 14 from: We therefore performed ……16S rRNA sequences)[2]) must be removed. At page 6 line 14-20 is already explained why 16sRNA is inadequate for Enterobacter identification.
- Furthermore I think that the conclusion can be placed in a wider scope; Something like:
  The phenotypic identification method Vitek II as well as the DNA sequence based typing methods with 16sRNA are not discriminatory enough to identify Enterobacter cloacae complex isolates, while sequencing a fragment of the hsp60 gene is.

Minor

- Page 3 Line 5 CSF : not described abbreviation
- Page 6 line 24 : remove 94.5%, 93.7% and 92.8% and Page 7 line 2-4 from E. hormaechei .......... respectively. I'm only interested which species it.
- Error in reference 4 Enterobacter cloacae complex
- Legend of figure 2:
  Not use the name of the bacteria that it is not but use the name as it is identified. Next, add case number.
