Reviewer's report

Title: Five-Years Surveillance of invasive Aspergillosis in a University Hospital

Version: 3 Date: 20 October 2010

Reviewer: Veli-Jukka Anttila

Reviewer's report:

To the authors could be clarified the terminology: stem cell transplantation, bone marrow transplantation. Stem cells can be originated either from bone marrow or peripheral blood. Which type of transplantation can cause more infectious problems are not clearly known, because there is no big differences related to the source where the cells are harvested. Other things instead of the origin of stem cells can be more relevant to the risk of infectious risks of these patients like autologous vs. allogeneic, myeloablative or non myeloablative allogeneic etc. In some sentences authors use the term bone marrow/stem cell transplantation (page 8 line 12). The authors could simplify just using the term "stem cell transplantation".

In page 8 line 19: iatrogically should be iatrogenically.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
