Reviewer's report

Title: Efficacy of interventions to increase the uptake of chlamydia testing in primary care: a systematic review

Version: 1 Date: 9 February 2011

Reviewer: Christine Hardwick

Reviewer's report:

A valuable systemic review.

I would recommend this article for publication after minor essential revisions. These are

1. missing word(s) in paragraph 10 of results section "a large----was also observed"

2. Table 1 "statistical findings reported' column is missing some CI and superscript letters - presumably lost during formatting of table.

Discretionary revisions - would suggest improved labelling in figure 2 regarding the different categories e.g - patient education as 2 lines rather than 1.

My only comment - and this is concerns the publications reviewed by the authors rather than this systemic review is that there is little information of the sustainability of interventions. It could be that the interventions that are effective work well initially but then less well as interest wanes.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
