Reviewer's report

Title: Community-associated Methicillin-resistant Staphylococcus aureus Bacteremia and Endocarditis among HIV Patients: a cohort study

Version: 2 Date: 10 August 2011

Reviewer: Kyle Popovich

Reviewer's report:

I think the authors have adequately addressed comments brought up by reviewers.

I think the inclusion of embolic/metastatic complications strengthens the study.

While ideally the study would be more current than 2005, I think the study still adds to the literature for the intersection of CA-MRSA and HIV.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
