Reviewer’s report

Title: Mycobacterium tuberculosis Complex Drug Resistance Pattern and Identification of Species Causing Tuberculosis in Two Regions of Cameroon

Version: 2 Date: 29 December 2010

Reviewer: Gunes Senol

Reviewer’s report:

MDR-TB is an important problem in Africa. I think this manuscript will obtain additional data. Method is acceptable, but standard microbiological terms should be used. So, I advise to authors for consulting a microbiologist. Additionally, data should be discussed along with world resistance data.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
