Title: Cost-Effectiveness of 2+1 Dosing of 13-Valent and 10-Valent Pneumococcal Conjugate Vaccines in Canada

Version: 1 Date: 20 February 2012

Reviewer: Maurizio de Martino

Reviewer's report:

This is a very good paper, well written, with an excellent study design. Results are clearly reported and well discussed. I think that the paper can be accepted, provided some minor changes:

1. avoid the term "patients" (as in methods in the abstract or at page 8...). Children are healthy when they are vaccinated; 2. erase at page 7, line 5, the comma between PNE and hospitalized; 3. the authors must decide: or Streptococcus pneumoniae or S. pneumoniae, always throughout the text; 4. the authors must discuss more deeply the bias of the acquisition cost of PCV10 which was not available.
