Reviewer's report

Title: Antiseptics and disinfectants for the treatment of bacterial vaginosis: a systematic review

Version: 1 Date: 25 February 2012

Reviewer: Richard Beigi

Reviewer's report:

Major Revisions:
1. Many wording changes required for better language use
2. The most important thing to note from your extensive work is that the data is either non-existent or of such poor quality that there really is nothing major to glean from the current state of the science
3. The conclusion sentence regarding limited data suggest some antiseptics may be useful would be best removed, as the data is so weak, not sure it is appropriate to say that.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
