Reviewer’s report

**Title:** Deficiency in immunity to poliovirus type 3: A lurking danger?

**Version:** 3  **Date:** 18 November 2011

**Reviewer:** Maren Eggers

**Reviewer’s report:**

My comments.

The authors wrote in paragraph 1 that they had inserted a new paragraph concerning the immunity of PV3 vaccine and an age specific analysis of the data.

**Specific comments:**

In discussion, particularly, page 7 and page 8, the text need some proof reading since there is e.g. a bracket missing or the old sentence was not totally cleared. Additionally the newly added part of global context is difficult to read and to understand and would benefit from some professional editing. Perhaps the authors could include a table with the PV immunity status of the different countries.

**Level of interest:** An article of importance in its field

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**
