Reviewer's report

Title: In-vitro analysis of the microbicidal activity of 6 contact lens care solutions

Version: 2 Date: 6 July 2012

Reviewer: Takeshi Ide

Reviewer's report:

Dear Authors

Thank you very much for your detailed and dedicated job. Even with the newer CL-related products, the infectious keratitis never disappear in the real world. This is true to antibiotic eye drop or ointment.

Therefore, what we can do are 1-patient education 2-appropriate use of contact lens care materials.

In this respect, this paper is very important and informative. I myself like this report very much.

But I have to point several out points which should be addressed before approving:

1- The grammar problems
Authors miss a lot of COMMAS for easy reading.
In some sentences, the structure is not appropriate.
I would recommend the manuscript to be checked again by 3rd party agent.

2- The story flow
GOOD

3- The content
GOOD

4- Introduction and methods
GOOD

5- Result and Discussion
Comparing these 2 parts, the result is too short and hard to grasp the points, especially figure legend need more detailed information.

On the other hand, the discussion part is too long to follow the story, which blurs the points. Of course every piece of information is important but I would omit most.

Thanks again
