Reviewer's report

**Title:** Prognostic value of semi-quantitative bacteruria counts in the diagnosis of group B streptococcus urinary tract infection: a 4-year retrospective study in adult patients

**Version:** 1  **Date:** 18 August 2012

**Reviewer:** Mohammad Rahbar

**Reviewer's report:**

General comment

This work has been presented well and the isolation of GBS very important in microbiology Laboratories especially from females.

1- The name of microorganism should be written in Italic.

2- The laboratory methods for detection of GBS should be described in Material and Methods sections (including culture media and biochemical tests)

3- The colony count 102 CFU/ml has is significant especially in pregnant women.

4- How many of female patients was pregnant

5- The first paragraph in discussion section (The aim of this study … ) must be transferred in end of introduction section

This manuscript needs a major reversion.

Prof Rahbar

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
