Reviewer's report

Title: A prospective study to examine the epidemiology of methicillin-resistant Staphylococcus aureus and Clostridium difficile contamination in the general environment of three community hospitals in southern Ontario, Canada

Version: 2 Date: 1 October 2012

Reviewer: Ginny Moore

Reviewer's report:

Major Compulsory Revisions
None

Discretionary Revisions
A large amount of data is presented and the paper may have benefited from being more focused - perhaps by addressing each of the objectives in turn. Nonetheless, the authors have addressed the reviewers comments and the work will be of interest to those with closely related research interests.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
