Reviewer's report

Title: Malaria and related outcomes in patients with intestinal helminths: A cross-sectional study

Version: 2 Date: 29 August 2012

Reviewer: Davison Sangweme

Reviewer's report:

The authors have satisfactorily addressed the raised concerns under major compulsory revisions.

Minor Essential Revisions
1. On P13, Paragraph 2, the sentence "Similarly, the risk of anaemia was slightly higher in individuals co-infected with Plasmodium and intestinal helminth compared to malaria cases without having intestinal helminth infections." The term risk should replaced with "association" given the cross-sectional nature of the study.

2. Other grammatical corrections such as in the Background section: page 2, paragraph 2, Line 1 "others evidences" can be replaced by "evidence from other studies", and the phrase "could protect malaria" should be replaced by "may protect from malaria"

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
