Reviewer's report

Title: Pyogenic brain abscess, a 15 year survey

Version: 2 Date: 9 August 2012

Reviewer: somsri wiwanitkit

Reviewer's report:

retrospective review on a data on common disease from a single center is too small for international journal
the control of confounding factor cannot be done. the point is we cannot guarantee the reliability of the medical record in this retrospective study. also, the clinical management during 15 years might have some changes during this period, so we cannot tell that the summary on lab and treatment can reflect the real situation.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
