Reviewer's report

**Title:** Chlamydia trachomatis genovar distribution in clinical urogenital specimens from Tunisian patients: high prevalence of C. trachomatis genovar E and mixed infections

**Version:** 4  **Date:** 8 September 2012

**Reviewer:** Xiang-Sheng Chen

**Reviewer's report:**

Discretionary Revisions

(1) What statistical analysis was used to evaluate association between age, current infection, infertility and the genovar distribution?
(2) It is neccessary to discuss briefly on no association between infertility and genotypes in this study as it was reported to be associated of infertility with particular genotypes.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
