Reviewer’s report

Title: Systemic candidiasis caused by Candida kefyr in a neonate.

Version: 2 Date: 15 November 2011

Reviewer: Cornelia Lass-Floerl

Reviewer’s report:

Minor Essential Revisions

General comments
I am not sure whether this case represents a real "systemic candidiasis", as Candida was never isolated from specimens other than urine. From the data shown, blood cultures remained sterile? A fact, which should be adressed in the discussion section.

Specific comments
How often did you perform in vitro susceptibility testing? With how many strains?
How many blood cultures have been taken?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
