Reviewer's report

Title: Varicella Zoster Virus infection presenting as isolated diplopia: a case report

Version: 2 Date: 26 November 2012

Reviewer: Paul Schnitzler

Reviewer’s report:

The authors describe an interesting case of VZV infection presenting as isolated diplopia due to fourth cranial nerve palsy.

Minor revisions
1. please describe briefly VZV PCR methodology
2. on which day after admission was CSF taken
3. investigate intrathecal anti-VZV antibodies, this analysis would be interesting for readers

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
