Reviewer’s report

Title: The microbiome of chronic rhinosinusitis: culture, molecular diagnostics and biofilm detection

Version: 2 Date: 21 January 2013

Reviewer: Hsiu-Jung Lo

Reviewer’s report:

Dear Editor,

The authors have answered all comments raised previously. Nevertheless, it is not too difficult to find that due to small sample size, the information provided in this study is limited.

A table of 33 different bacterial species identified in CRS patients by the Ibis system should be provided as supplementary data.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
