Reviewer's report

Title: Ambulatory consolidation chemotherapy for acute myeloid leukemia with antibacterial prophylaxis is associated with frequent bacteremia and the emergence of fluoroquinolone resistant E. coli

Version: 2 Date: 12 March 2013

Reviewer: Chiara Cattaneo

Reviewer's report:

Authors have made changes to the manuscript as requested.

However, a matter remain unresolved: data reported cannot be considered the mirror of local epidemiology because of the overestimation of Gram-positive infections. This concept should be clearly reported in the discussion

Discussion seems too long and should be shortened

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
