Reviewer’s report

Title: Ambulatory consolidation chemotherapy for acute myeloid leukemia with antibacterial prophylaxis is associated with frequent bacteremia and the emergence of fluoroquinolone resistant E. coli

Version: 2 Date: 18 February 2013

Reviewer: elio castagnola

Reviewer’s report:

1. the paper has been reviewed, but the problem still remains: old data and high proportion of resistance to quinolones. authors say that prophylaxis is still needed, with such a proportion guidelines say not to use...

Level of interest: An article of limited interest
