Reviewer's report

Title: Natural ventilation reduces high TB transmission risk in traditional homes in rural KwaZulu-Natal, South Africa

Version: 1 Date: 6 February 2013

Reviewer: kevin L winthrop

Reviewer's report:

I reviewed the manuscript. it is well written, and I would recommend accepting as is. Its findings are not earth-shattering (ie if you open the windows and doors, then your estimated TB risk declines), but it appears well-done and is well-written. There are few studies at least in sub-Saharan Africa that have evaluated this systematically, and there is likely relavence to their findings for that area of the world
