Reviewer’s report

Title: Seroepidemiology of human enterovirus71 and coxsackievirusA16 among children in Guangdong province, China

Version: 2 Date: 21 May 2013

Reviewer: Jeffery Cutter

Reviewer’s report:

Discretionary Revisions:

The discussion section could be strengthened by discussing the implications of the fairly high seroprevalence against EV71 and CA16 found in terms of asymptomatic and unrecognised infections, public health importance and control strategies.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
