Reviewer's report

Title: Comparing human papillomavirus prevalences in women with normal cytology or invasive cervical cancer to rank genotypes according to their oncogenic potential: A meta-analysis of observational studies

Version: 2 Date: 29 July 2013

Reviewer: Tricia Luhn

Reviewer's report:

This meta-analysis of HPV genotype prevalence/oncogenicity concludes that there are several HPV genotypes that may warrant further investigation as it pertains to cervical cancer prevention. The revisions of the manuscript are acceptable and addressed previous concerns and I do not have further edits for the authors.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
