Reviewer's report

Title: Facial Skin and Soft Tissue Infection Caused by Mycobacterium wolinskyi Associated with Cosmetic Procedures

Version: 1 Date: 7 October 2013

Reviewer: Andreas H. H Groll

Reviewer's report:

The manuscript submitted by Dr. Yoo and colleagues reports the case of facial skin and soft tissue infection with Mycobacterium wolinskyi after multiple cosmetic procedures of filler injection and laser therapies. Altogether, this is an interesting, timely, and well-structured manuscript.

I have only two minor comments/suggestions:

1. Case presentation: Pl. provide the nature of cosmetic fillers to the reader.
2. Figures 5 A and B may be cropped in order to focus on the resected tissue / metal parts.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
