Reviewer's report

Title: Enterovirus Genotypes Causing Hand Foot and Mouth Disease in Shanghai, China: A Molecular Epidemiological Analysis

Version: 3 Date: 17 June 2013

Reviewer: Audrey Mirand

Reviewer's report:

The authors have taken into account the majority of the comments and the revisions which have been previously suggested.

I still think that the detection rates of each enterovirus types should be calculated with the number of positive clinical specimens.

However, I consider that the paper is now suitable for publication.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
