Reviewer's report

Title: Evaluation of Ertapenem Use with Impact Assessment on Extended-spectrum Beta-lactamases (ESBL) Production and Gram-negative Resistance

Version: 2 Date: 10 October 2013

Reviewer: Emmanuel Forestier

Reviewer's report:

Manuscript has been clearly improved. Answers to most of revisions have been done. Nevertheless, I would maintain my previous comment that the article should mainly focus on the impact of ertapenem on bacterial epidemiology at Singapore hospital. Other parameters (appropriateness, efficacy and tolerance) should be discussed as secondary data because of the study method.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
