Reviewer's report

**Title:** Dynamic changes in HBV surface marker titers and HBV DNA loads of infants born to HBsAg-positive mothers: can positivity for HBsAg or HBV DNA at birth be an indication for HBV intrauterine infection in newborns?

**Version:** 2  **Date:** 10 June 2013

**Reviewer:** Selda Polat

**Reviewer's report:**

Major Compulsory Revisions

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Not suitable for publication unless extensively edited

**Statistical review:** Yes, but I do not feel adequately qualified to assess the statistics.
