Reviewer's report

Title: Prevalence of diphtheria toxoid IgG antibodies in children, adolescents and adults in Poland

Version: 4 Date: 10 October 2013

Reviewer: Wayde Weston

Reviewer's report:

This manuscript describes concentrations of ant-diphtheria toxoid antibody levels in a sampling of the Polish population. Serum samples were residual samples from diagnostic laboratories or from routine health screenings. As such it's not clear that this represents a random sampling of the population. Nevertheless the data are interesting in that they indicate relatively low seroprotection rates for diphtheria in Poland.

The manuscript contains numerous errors in grammar and syntax that should be addressed before publication.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I am employed by a pharmaceutical company that makes diphtheria toxoid-containing vaccines approved for use in Poland.
