Reviewer's report

Title: Constrictive pleuropericarditis: a dominant clinical manifestation in Whipple's disease

Version: 2 Date: 18 October 2013

Reviewer: Tatjana Lejko Zupanc

Reviewer's report:

Discretionary revisions

The authors state that CSF was positive for T. whipplei. No data on other parameters and patient's mental status are presented but would be interesting. Were there any imaging studies of the CNS?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
