Reviewer's report

Title: Prevalence of Hyperglycemia among Adults with Newly Diagnosed HIV/AIDS in China

Version: 1 Date: 10 December 2012

Reviewer: Tollula Honi

Reviewer's report:

Guidelines for review:
1. Is the question posed by the authors well defined? Yes
2. Are the methods appropriate and well described? Yes
3. Are the data sound? Yes
4. Does the manuscript adhere to the relevant standards for reporting and data deposition? Yes
5. Are the discussion and conclusions well balanced and adequately supported by the data? Yes
6. Are limitations of the work clearly stated? Yes
7. Do the authors clearly acknowledge any work upon which they are building, both published and unpublished? Yes
8. Do the title and abstract accurately convey what has been found? Yes
9. Is the writing acceptable? Yes

Minor comment:
The authors do not give data on the proportion of the sample population with known diabetes diagnosis and most recent HbA1C in these persons. This information could be important to
1. demonstrate the need to integrate chronic disease management if data show poor control.
2. give an idea of the incremental yield of screening for diabetes at HIV diagnosis
If this data is unavailable, the authors should make a comment about this in the discussion/limitations.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
Declaration of competing interests:
