Reviewer's report

Title: Yersinia pseudotuberculosis enterocolitis resembling enteropathic gammadelta T-cell lymphoma with abnormal clonality

Version: 2 Date: 2 November 2013

Reviewer: Wai-Kay Seto

Reviewer's report:

- Authors could consider discussing more on the microbiological characteristics of Yersinia, its epidemiology and its recommended clinical management and not concentrate on its T-cell reactions.
- Any other possible differentials of this enterocolitis besides lymphoma and Yersinia.
- What is the rationale for checking IL2 levels in the clinical context of enterocolitis and is this routine?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
