Reviewer's report

Title: Kaposi's sarcoma associated herpesvirus infection among female sex workers and general women in Shanghai, China: a cross-sectional study

Version: 3  Date: 20 December 2013

Reviewer: Anne Buve

Reviewer's report:

MINOR ESSENTIAL REVISIONS

1. Page 6, paragraph on sample size calculation. The authors should explain what the underlying assumptions were for their sample size calculation. Did they want to find a statistically significant difference between FSW and GW; or did they want to assess prevalence with a certain precision.

2. Page 12, second paragraph. When the authors say that they adjusted for potential confounders "such as age, education and marital status, do they mean that these were the only variables they adjusted for? If so, it would be more elegant to say "after adjusting for age, education and marital status".

3. Page 15, first paragraph: the English needs to be revised.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
