Reviewer's report

Title: Prevalence of Human Salmonellosis in Ethiopia: a Systematic Review and Meta-analysis

Version: 2 Date: 5 August 2013

Reviewer: Stephen Mshana

Reviewer's report:

The author has provided sound data on Salmonellosis in Ethiopia. The topic is relevant especially with one health concept.

Minor revision

• The author needs to include statements about methods used to culture, identify and type salmonella in 17 studies so that the reader can judge the comparability of results from those studies.
• More statement is needed how the author ensured that hospital based studies represent the population

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
