Reviewer's report

**Title:** Chlamydia trachomatis Infection in Early Neonatal Period

**Authors:**

Dr Kei Numazaki (numazaki@sapmed.ac.jp)
Hideomi Asanuma (hide.asanuma@nifty.ne.jp)
Yuichi Niida (yuniida@nifty.com)

**Version:** 2  **Date:** 18 Mar 2003

**Reviewer:** Mirja Puolakkainen

**Level of interest:** A paper whose findings are important to those with closely related research interests

**Advice on publication:** Other (see below)

The manuscript has improved considerably. Also, the (English) text seems to flow better. However, the text still needs linguistic editing (there are still minor grammatical errors).

**Abstract:**

background: Remove the words "in the etiology of", change "was" to "were"

conclusions: Start by saying "we identified five case of..." and rewrite the last sentence ("are necessary" should be replaced).

materials and methods: the expression "almost all neonates" should be defined more clearly to give the reader an idea how large the study population was.

discussion: the second paragraph is not discussing findings of this study, and it should be shortened. Also, the whole discussion section should be more compact.

**Competing interests:**

None declared.
