Version: 2 Date: 14 May 2003

Reviewer: Eskild Petersen

Level of interest: not specified

Advice on publication: Other (see below)

The authors have addressed the points raised in the previous review.

I suggest that the conclusion in the abstract include a sentence saying that "the study did find that veterinary staff have a risk of Toxoplasma infection different from the general population".

The paper include a lot common information about Toxoplasma infections, and can be shortened considerable if the editors want so.
