Reviewer's report

Title: Correlation between Human Papillomavirus Infection and Bladder

Version: 1 Date: 20 July 2005

Reviewer: S Baithun

Reviewer's report:

It is a well written paper and in my opinion should be accepted for publication. However it will interesting if the authors can correlate the presence or absence of sqaumous metaplasia within the tumours they examined. In addition if they can correlate the human papilloma positivity to these tumours.
