Reviewer's report

Title: A sensitive flow cytometric methodology for studying the binding of L. chagasi to canine peritoneal macrophages

Version: 3 Date: 6 March 2005

Reviewer: Emanuela Handman

Reviewer's report:

General
The revised manuscript is much improved and the revisions have answered my concerns.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
There are still a large number of mistakes in English, including spelling mistakes and a sentence in Portuguese in the subtitle: Evaluation of CR3 expression using flow cytometry.

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No
