Reviewer's report

Title: Prosthetic Valve Endocarditis Caused by Pseudomonas luteola

Version: 2 Date: 7 September 2005

Reviewer: Tom Elliott

Reviewer's report:

Thank you for sending me the revised manuscript for consideration. The authors replied adequately to all my comments except for "the following":

3. They need to add on line 32 - In July 2003 a 53 year old man was admitted to the Timone hospital in Marseilles, France presenting with the following clinical signs of acute endocarditis. Otherwise the reader will be unsure as to whether or not they had any other clinical signs present.

4. Line 46 - need to add in within 48 hours of "anaerobic" culture otherwise I am satisfied with the response and would support this paper being published.
