Reviewer's report

Title: Epidemiological Characteristics of Nosocomial Infection in a Newborn Intensive Care Unit (NICU), South Korea

Version: 4 Date: 12 June 2006

Reviewer: Kevin Laupland

Reviewer's report:

General

The manuscript has been significantly improved. The missing charts are concerning but this does not appear to be able to be corrected. The authors need to emphasize this limitation further in the article and explain the reason.

There should be a concluding few sentences in the discussion (for example indicating how this study adds to the current literature). At present it ends on a limitation.

------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No
