Reviewer’s report

Title: Effects of highly active antiretroviral therapy with Nelfinavir in vertically HIV-1 infected children: 3 years of follow-up

Version: 2 Date: 26 June 2006

Reviewer: Marcelo Soares

Reviewer’s report:

General

The manuscript by Resino and colleagues has now been corrected and most of the criticisms were properly answered. It is much more descriptive than conclusive now, as it should be in view of its multifactorial and complex nature.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

There are still problems with the Figures. In the manuscript text, the new Figure 2 is wrongly divided into panels D, E and F, and do not match the panels A, B and C (this is the correct form). This should be corrected.

There are still a few problems with the English language, especially in the newly added text. This should be revised.

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No
