Reviewer's report

Title: Prevalence of Vancomycin-Resistant Enterococcus fecal colonization among kidney transplant patients

Version: 2 Date: 3 August 2006

Reviewer: Giorgina Barbara Piccoli

Reviewer's report:

General

the paper was greatly improved by the revisions; given the type of data and the limitations, that were clearly discussed in the discussion, I think that the paper cannot be further improved. Overall, I think it may be worth publication, mainly because of its novelty.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
