Reviewer’s report

Title: Female genital schistosomiasis as an evidence of a neglected cause for reproductive ill-health: A retrospective histopathological study from Tanzania.

Version: 2 Date: 13 June 2006

Reviewer: U Petry

Reviewer’s report:

I read the complete resubmitted original work. The revised manuscript is now acceptable for publication. I noted some language mistakes but there is no need for further revision. I pointed out in my primary review that the paper is important and all BMC-questions for reviewers can now be answered in favour of the paper.

The paper should be published as it is.
