Reviewer's report

Title: Molecular evidence of Ureaplasma urealyticum and Ureaplasma parvum colonization in preterm infants during respiratory distress syndrome.

Version: 6 Date: 31 October 2006

Reviewer: Arnold Smith

Reviewer's report:

General

I feel that the manuscript should be published. In this contemporary era, the definition of a "gold standard" technique is changing, thus we have to accept the authors results for what they are. The authors have done a reasonable job and are careful in not implying a direct cause-and-affect relationship. The English grammar and spelling still need some attention.

--------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

--------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

--------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)
