Reviewer's report

Title: Thrombocytopenia in the experimental leptospirosis of guinea pig is not related to disseminated intravascular coagulation

Version: 2 Date: 18 October 2005

Reviewer: R Zuerner

Reviewer's report:

General

The revised manuscript is quite improved over the original submission. Concerns voiced earlier about scientific issues have been addressed and the paper is scientifically sound. The writing style is still rough and requires modification.

------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
none

------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
Extensive revision is needed to improve grammar and clarity throughout the manuscript.

------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)
none

------------------------------------------------------------------------------------------------------------------

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No
