Reviewer's report

Title: Human papillomavirus infections in women seeking cervical Papanicolaou cytology of Durango, Mexico: prevalence and genotypes.

Version: 1 Date: 15 June 2005

Reviewer: Silvia Cavalcanti

Reviewer's report:

General

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

The article is clear and well conducted. I would like to know why the authors did not tested for other prevalent high risk HPV 31, 35 and 58. Other relevant co-factors would also be tested such as other Sexually transmitted diseases.

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

Tables could be better presented, following other articles models.

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No
