Reviewer's report

Title: Recall of intestinal helminthiasis by HIV-1-infected South Africans and rationalisation as to why analysis of possible consequences of worm/HIV co-infection should not be based mainly on excretion of helminth eggs: a questionnaire-based study

Version: 1 Date: 20 March 2006

Reviewer: Alan Fenwick

Reviewer's report:

General
I think this paper deserves publication. I can only be positive, and find no reason to criticise the paper. The bibliography is also comprehensive. I recommend publication without any changes.

-------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

-------------------------------------------------------------------------------------------------

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable
