Reviewer's report

Title: Immuno-epidemiology of human Schistosoma haematobium infection: preferential IgG3 antibody responsiveness to a recombinant antigen dependent on age and parasite burden.

Version: 2 Date: 5 June 2006
Reviewer: Daniel Colley

Reviewer’s report:

General

-----------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

None.

-----------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

In the added section on the comparison of SWAP concentrations used in the ELISA the ug units need to be changed to mu.

-----------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

None.

-----------------------------------------------------------------------------------------------------------------------

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field
