Reviewer’s report

Title: Procalcitonin (PCT) and C-reactive Protein (CRP) as severe systemic infection markers in febrile neutropenic adults.

Version: 2 Date: 19 September 2007

Reviewer: Efthymia Giannitsioti

Reviewer’s report:

General

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Data and discussion are adequately presented. However, the manuscript is in need for editing. For instance, syntax and the use of language have to be corrected in same parts of the text before publication. Symbols (i.e. "0.5" and not "0,5") have to be unified in text and tables as well.

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
