Reviewer's report

Title: Primary muscular cystic hydatidosis: case report

Version: 2 Date: 19 January 2007

Reviewer: Nefise Cagla Tarhan

Reviewer's report:

General

----------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

----------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

I did not understand Figure 1a (which you have added according to my suggestions.) I think it is the negative format of the T1-weighted precontrast image, but this format does not show the change after the contrast enhancement on figure 1b. It should be changed to positive format and the name of the sequence should be added to figure legend.

----------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
