Reviewer's report

Title: Chlamydia and gonorrhoea in pregnant Botswana women: Time to discard the syndromic approach?

Version: 2 Date: 21 February 2007

Reviewer: Xiang-Sheng Chen

Reviewer's report:

General

-----------------------------------------------------------------------------------
Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-----------------------------------------------------------------------------------
Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-----------------------------------------------------------------------------------
Discretionary Revisions (which the author can choose to ignore)

Satisfied with the replies of the authors to comments, but the Table 3 could be simplified to include only the multivariate analysis and its significant results. In this case, the numbers which have been shown in Table 2 could be omitted.

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
