Reviewer's report

Title: PCR reveals significantly higher rates of Trypanosoma cruzi infection than microscopy in the Chagas vector, Triatoma infestans: High rates found in Chuquisaca, Bolivia

Version: 2 Date: 30 March 2007

Reviewer: Ana Maria Jansen

Reviewer's report:

General
The revised manuscript improved satisfactorily. The result is a plain manuscript, not innovative with obvious results and a poor conclusion. Nevertheless, it is correctly written and results are clearly exhibited.

I consider that, in its present form, this is a publishable manuscript

-------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)
